TOTLE

Powering the Dapp Economy

A single source of liquidity powering decentralized payment systems, exchanges, and other open financial apps.

ETHUofT

Totle is building a set of tools to make digital asset exchange as seamless and secure as possible. Using Totle's endpoints, develop an application that betters the financial lives of it's users. Whether it's an application that incentivizes users to save, invest, earn rewards, or obtain loans - your options are limitless. Think very hard about crypto-economic incentive structures and how they can tie into making your product more valuable.

Try to hide as many technical concepts as possible and think about the end user experience before anything else. Ask yourself:

1. Can anyone be on-boarded to my product seamlessly without any (or little) prior knowledge of crypto?
2. Does my product actually need to use distributed systems to achieve it's goal?
